SEASON

1943-1944

We Are the Home of the Glen No. 40
Camellia.

No Argentine Ants or Japanese
Camphor Scale found on or near this
nursery.

We are NOT in the White-Fringed
Beetle quarantine area.

Buy some War Bonds, Then Buy
More so you may do your share in win-
ning this war.

GREETINGS:

To Our Friends and Patrons:

Please accept our sincere thanks for every order with which you have favored us in past seasons. In expressing our sincere appreciation, will say our aim toward successful operation is to merit your continued good will. With this in mind we are bending every effort to produce better quality nursery stock at prices you can afford to pay.

We are of the opinion that a home is not complete until it is "Planted" and naturally will take great pleasure in offering you our assistance in every way possible to bring about this acquisition to your home grounds.

From the many letters of praise for our stock from our patrons this season we feel satisfied that we can merit your future patronage.

WE GUARANTEE: Our stock to be grown true to name and properly packed. We cannot control condition after plants leave us, making it impossible for us to guarantee plants to live.

Our responsibility for delivery ceases when we have delivered the stock in good condition to the transportation company or carrier. Any claims should be made within five days of receipt of stock. It must be agreed that our liability under this guarantee is limited to the original price received for stock.

TERMS: All orders must be accompanied by cash: Add Sales Tax to all orders if your State demands Sales Tax.

TRANSPORTATION: State whether order is to be shipped by parcel post, express or freight.

Prices subject to change without notice, these prices cancel all previous quotations.

Visitors always welcome.

Cultural Information

For growing better Camellias and Azaleas

Camellias growing in pots or tubs makes one of the finest house plants, they can be grown for years in a medium size pot or tub. They give you flowers in winter time, when flowers are scarce. Most people think that it takes an expert with a greenhouse to grow them. If you can grow a coleus you can grow camellias. They like a cool house temperature around 45 to 60° in winter. Keep them well watered, but do not keep the ground water-logged, sprinkle the leaves during the hot dry periods in summer, carry in semi-shade, bring the plants in before heavy freezes.

Out-door planting of camellias can be done from the middle of September until the first of April. They will grow in any good garden soil, in full sun or semi-shade. Care should be taken in buying good strong healthy plants, you are invited to come and see our stock any time of the year, we know you will like the strong sturdy plants.

If your land is a sandy soil take out the sand down to two feet and refill hole with 1-3 peat moss 1-3 well rotted dairy fertilizer and 1-3 good garden soil, care should be taken to never plant camellias any deeper than they were grown in the nursery row. Water well at time of planting and during the hot dry spell the first summer.

Fertilize your camellias the latter part of February, we use Vigoro, any good fertilizer will do. All our camellias in the lawn over three years old, we use a bushel of well rotted dairy fertilizer every other spring. You can mulch with peat moss or pine-needles to keep down weeds and help hold moisture, we work the soil around our plants every week during the summer, in place of the mulch.

If you have alkaline soil, then use aluminum sulphate at the rate of four inch pot full to a wheel barrow of soil.

Plants selected at the nursery will be priced according to their individual merits.

Insects And Diseases

Red Spiders attack both Azaleas and Camellias. It is apparent by dropping of many leaves from the Azalea; the Camellia leaves become brown in color. On Azaleas you can use the hose and wash them off. If this does not control them, use the following dust mixture: Measure, eight pounds sulphur, one pound arsenate of lead, one pound tobacco dust. Dust on early in the morning while the dew is on. Be sure and dust the under side of the leaves.

Camellias are attacked by several species of scale insects. You can tell when your Camellia has scale by the leaves becoming spotted and yellow, caused by scale on the under side of the leaves. They should be sprayed with Nursery Volk, Jr., one part to 50 parts of water. If the infestation is heavy they should be sprayed three times a year during the early spring and summer. Be sure and spray the under side of the leaves as that is where you will find the scale. Warning: DO NOT SPRAY Camellias in late fall or winter as the sudden cold

weather just after spraying may kill your plants, or cause buds to drop.

Remember, buy good plants, place in well prepared beds, spray when needed, mulch with peat moss, and you will have shrubs of which to be proud.

Azaleas can be transplanted any time of the year. However the best time is from the first of September through March. Camellias can be transplanted from the latter part of September until growth starts in spring.

Any special problem that you may have in regard to your plants, send us a card and we will be glad to help you.

Camellia Japonica

This is king of our broad-leaved evergreens, here in the south land you may have these beautiful flowers from September through into latter part of March, in many colors and from singles to large doubles. They make fine tub and pot plants. They will grow in almost dense shade and full sun. Camellias will stand severe weather, if the cold comes gradually and the plants have an opportunity to harden up before the first severe freeze. However an early severe freeze while growth is still tender, will probably cause damage to the buds.

It is a fact that the names of camellias are confused. Some varieties may be purchased under several different names from different nurseries. We have made every effort to avoid adding to this confusion, and we have tried to list the varieties in our catalogue under the names we believe they are most generally known to the public. Visit our nurseries, we will be glad to help you make your selection. You will like our plants and we will be glad to see you.

Order early then you will not be disappointed.

In our rare varieties of camellias we have grafted plants, will quote you on sizes and prices.

Plants selected at the nursery will be priced according to their individual merits.

Climbing Talisman, golden yellow.

Climbing Marechal Neil, yellow.

Priced: Each _____\$.50 Twelve for _____\$4.50 Prepaid

HINTS ON ROSE CULTURE

Roses do best in a stiff soil, not too light. Add clay where you have too sandy soil. A good mixture of peat moss, well rotted cow manure, and bone meal is beneficial. Roses are heavy feeders and should be well fertilized and watered.

There are two diseases and one pest that give most of the trouble here in the South. (1) Mildew: May be controlled by dusting with Dusting Sulphur. (2) Black Spot: A fungus growth which causes black spots on the leaves and causes them to turn yellow and fall off. Spray with Bordeaux Mixture every 10 days or two weeks. (3) Thrips: An insect which feeds on the blooms and leaves. Can be controlled by using nicotine sulphate at the rate of 1 to 600 to your Bordeaux spray.

ROSE ROULETTE — Very dwarf form of rose, never grows over ten inches high, small double pink flower. Novelty for pot or rock garden.

Each _____\$.35

Six for _____\$1.50
